Area 9 depots captured	ground and aerial tours	password-protected access	disruption to depot operations

THE PROJECT

Depots are the operational backbone of National Highways. HDS captured interactive ground and aerial 360° views of every Area 9 depot, giving staff secure virtual access for inductions, remote inspections and planning.

THE CHALLENGE

- Induction material lacked a clear view of depot layouts
- Ongoing site changes needed up-to-date visual records
- New depot planning required complete site visibility
- Inspection and familiarisation visits interrupted daily operations

OUR APPROACH

01 360° photography, drone flyovers and on-site filming of each depot, inside and out

02 Tours hosted on password-protected links with controlled user access

03 Building layouts and condition captured as a baseline for planning

360 depot tour with marked-up points of interest

Aerial capture of yards, lanes and markings

OUTCOMES

Smarter inductions

Staff and contractors see the site virtually before they arrive.

Accurate asset records

Depots visually documented for tracking and maintenance.

Faster planning

Remote access cut site visits and sped up development planning.

Safety and compliance

Visual records support H&S reviews without live walkthroughs.

THE RESULT

Interactive tours and aerial surveys across every Area 9 depot now support training, asset management and depot redevelopment.

Start a project

Tell us about your asset. A desktop review, airspace check and fixed cost, agreed before we mobilise.
